

New Choice Panel Range

Why not combine your visitor entry system with keyfob electronic access for the apartment tenants. With no moving parts access control can enhance security without the need for worry over traditional keys and lock barrels.

Keyfobs require no power and are lifetime guaranteed against failure. This solution is particularly useful for housing associations where key management is vital. It is also essential in today's modern environment to interface multi entrances, car parks and secure bin stores etc.

Entrotec's, much respected Entrotag technology compliments the Choice range perfectly. With a range of options in the Entrotag family of controllers anything from one door and one keyfob (Sensortag) to 16 doors and 2000 sensortags are available.

SECURITY THROUGH INNOVATION
